Sensitivity Study of $\gamma\gamma \to \gamma Z$ Anomalous Coupling in HL-LHC

Sima Bashiri

Institute For Research In Fundamental Science (IPM)

Proton POG Meeting

Exclusive Production of $\gamma\gamma \to \gamma Z$ Anomalous Coupling

Exclusive reactions pp $\to$ p + X + p can be studied by measuring X in a general purpose detector (CMS) and the scattered intact protons with forward proton detectors (PPS) located at $\sim$ 210 m with respect to the main interaction vertex.

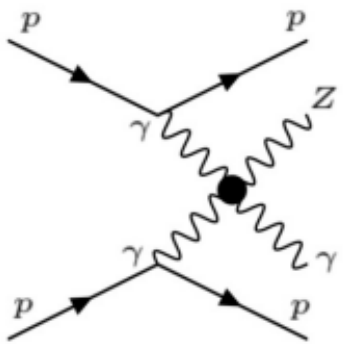

Table of Signal and Background Cross Sections

Signal/Background	Process	σ (pb)	Number of Events
Signal, Vertical	FPMC bSM 14TeV AAAAzeft A1A 0E0 A2A 1E-13 pt50-noHADR 3.556E-4 Zmumu.root	3.55e-4	5329

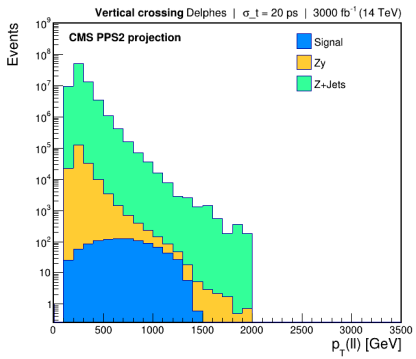
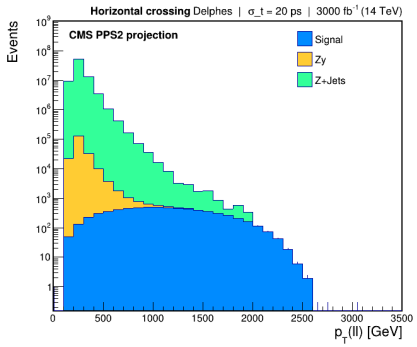
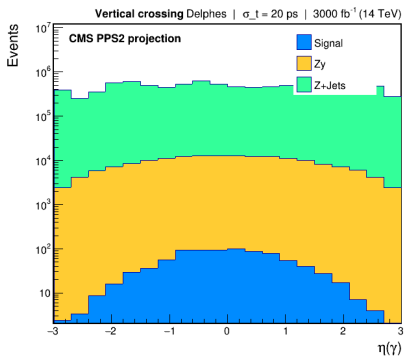
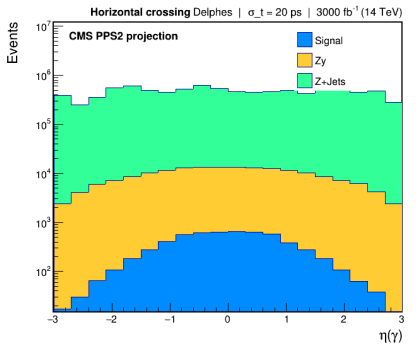
SM Zy background	Zgamma_inc_SM_Madgraph5_PhotonPT200GeV_Delphes_PU200	0.152	1838000
Z+jet (fake photon)	ZJets_inc_SM_Madgraph5_JetPT200GeV_Delphes_PU200	60.517	1000000

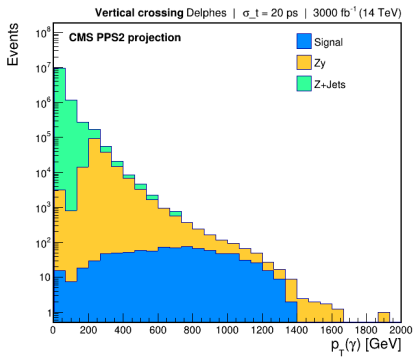
Central Object Selection (Muon Selection)

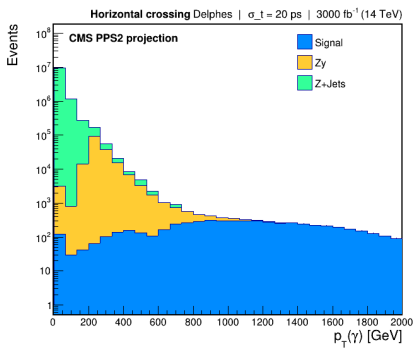






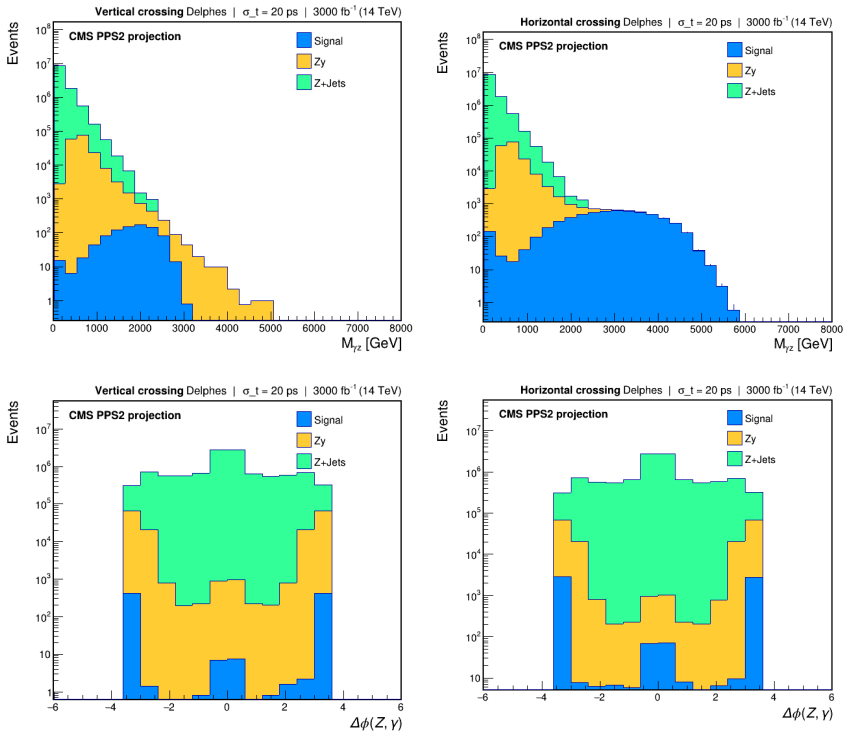






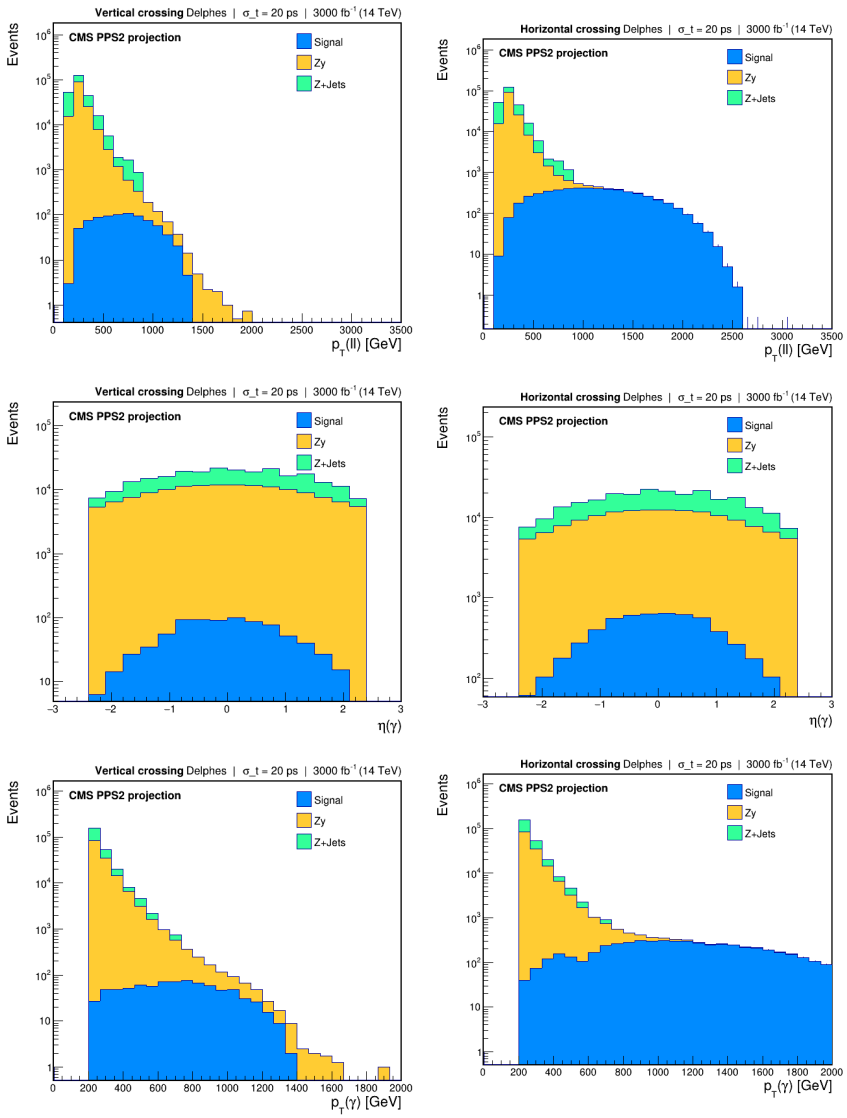
Two same flavor, oppositely signed charged leptons(Muons) with loose criteria, $\eta < 2.4$.
$p_{T_Z} > 100$ GeV.

Central Object Selection (Muon Selection)



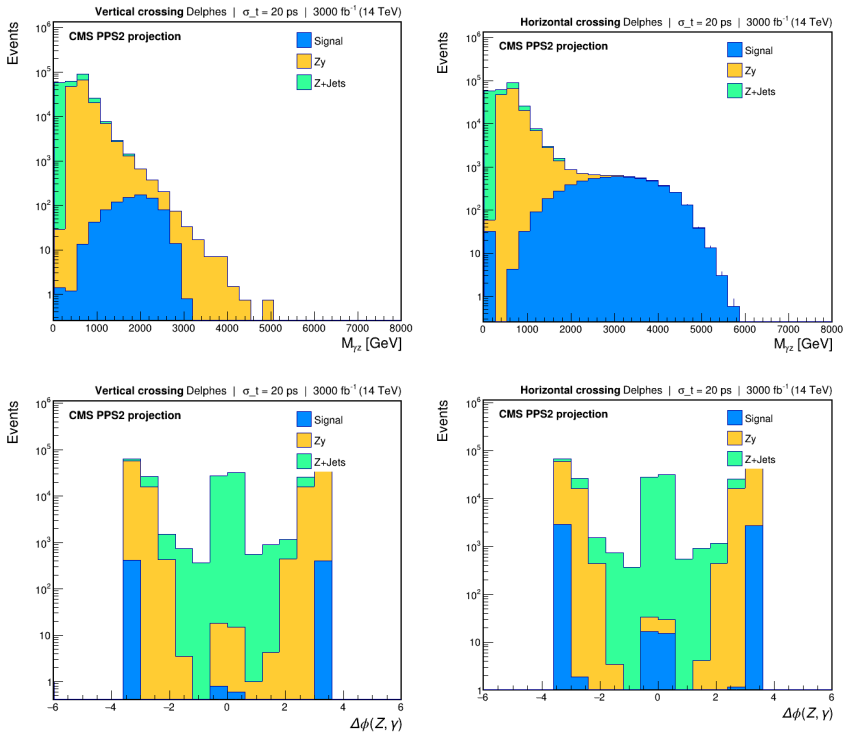
Two same flavor, oppositely signed charged leptons(Muons) with loose criteria, $\eta < 2.4$.
$p_{T_Z} > 100$ GeV.

Central Object Selection (Photon Selection)



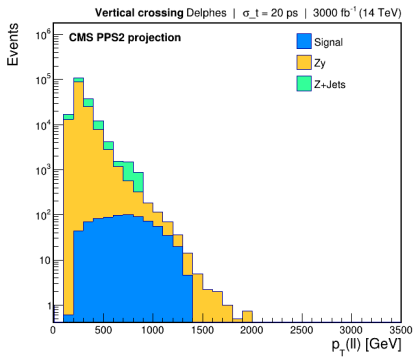
- $p_{T_\gamma} > 200\,\text{GeV}$
- Loose criteria and $\eta < 2.4$
- Rejecting photons with:
  - SumPtCharged > 5
  - SumPtCharged < 0

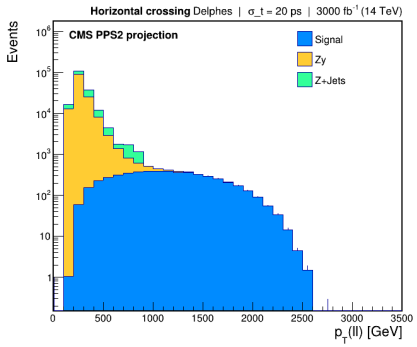
Central Object Selection (Photon Selection)

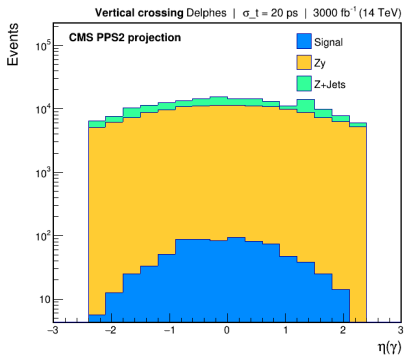


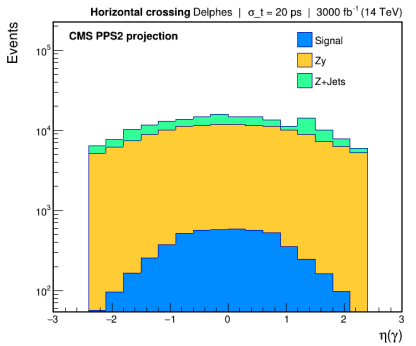
- $p_{T_\gamma} > 200\,\text{GeV}$
- Loose criteria and $\eta < 2.4$
- Rejecting photons with:
  - SumPtCharged > 5
  - SumPtCharged < 0

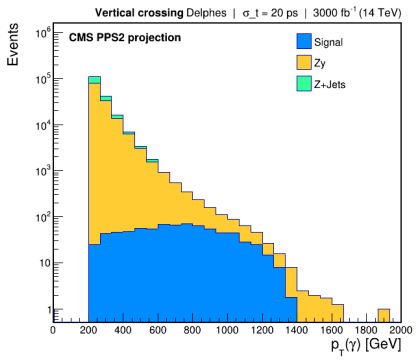
Central Object Selection (Z-boson mass)

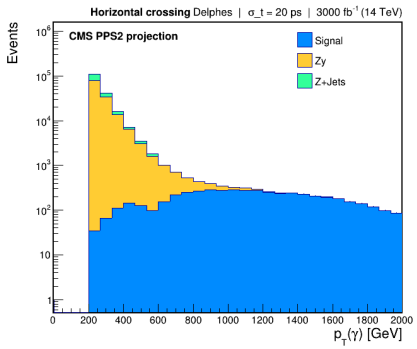






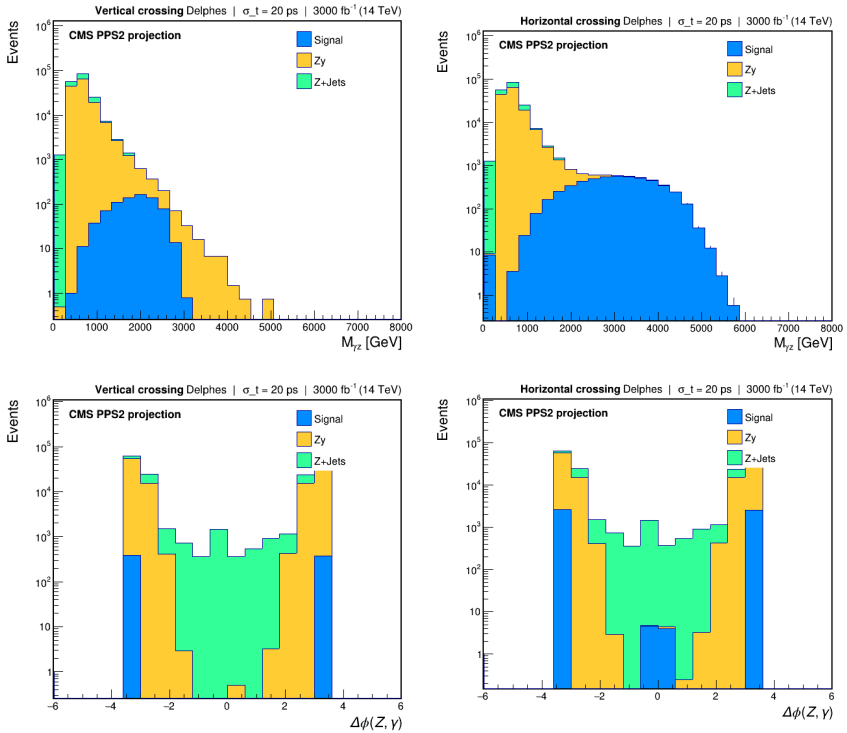






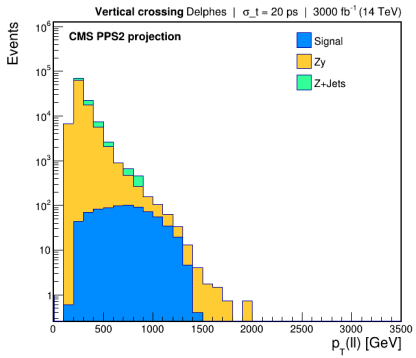
Reject events with $|M_Z - 90\,\text{GeV}| > 15\,\text{GeV}$.

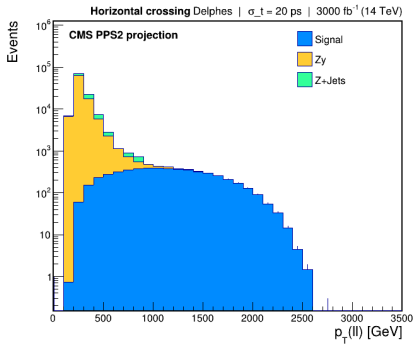
Central Object Selection (Z-boson mass)

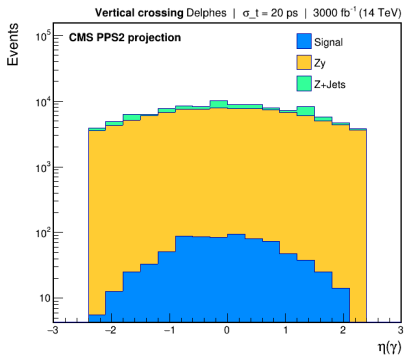


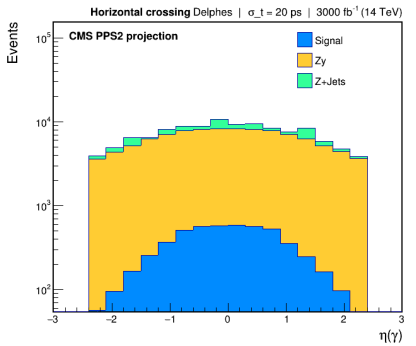
Reject events with $|M_Z - 90\,\text{GeV}| > 15\,\text{GeV}$.

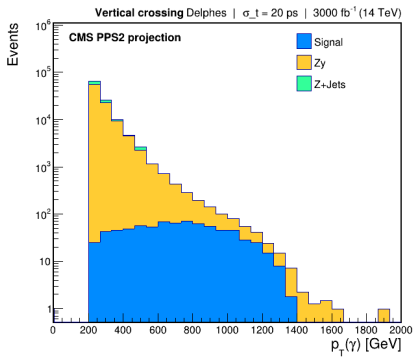
Central Object Selection ($\Delta\phi(Z,\gamma)$)

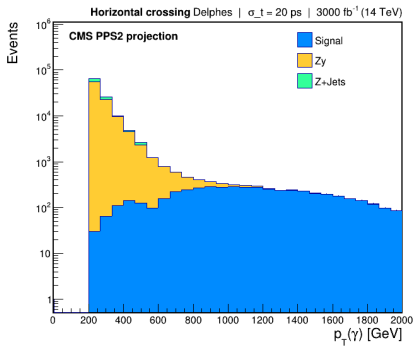






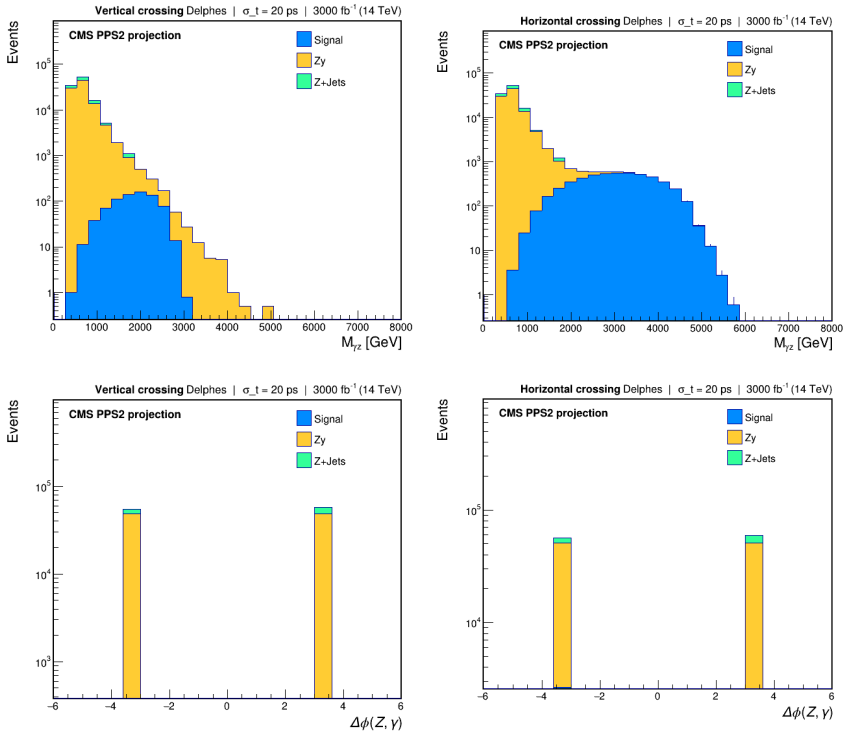






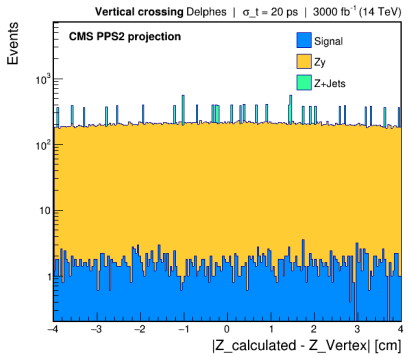
Expecting Z and γ to be back-to-back, reject events with $||\Delta\phi(Z,\gamma)| - \pi| > 0.1$.

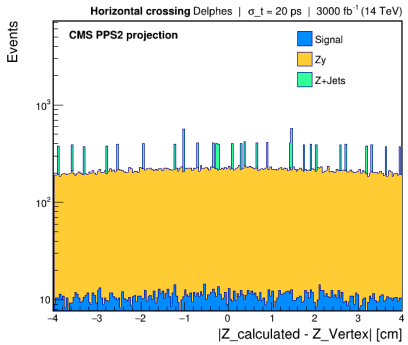
Central Object Selection ($\Delta\phi(Z,\gamma)$)

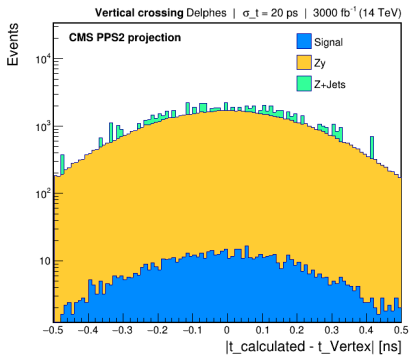


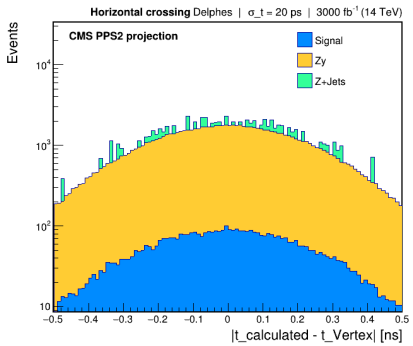
Expecting Z and γ to be back-to-back, reject events with $||\Delta\phi(Z,\gamma)| - \pi| > 0.1$.

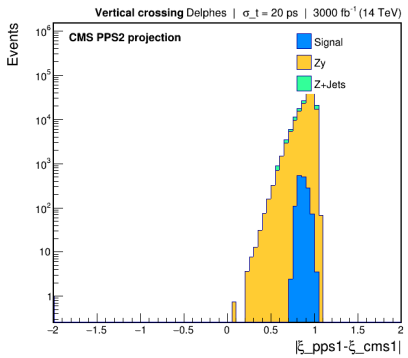
Central Object Selection ($\Delta\phi(Z,\gamma)$)

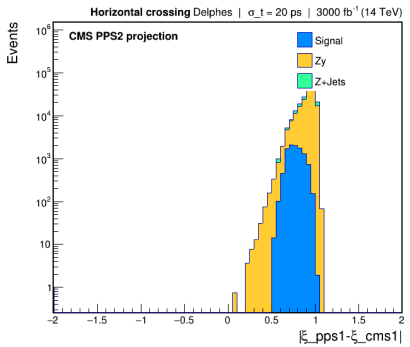










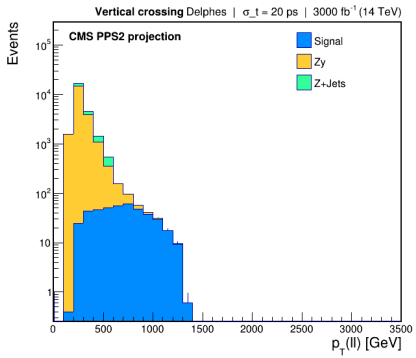


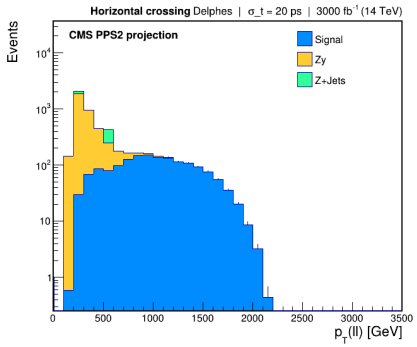
Expecting Z and γ to be back-to-back, reject events with $||\Delta\phi(Z,\gamma)| - \pi| > 0.1$.

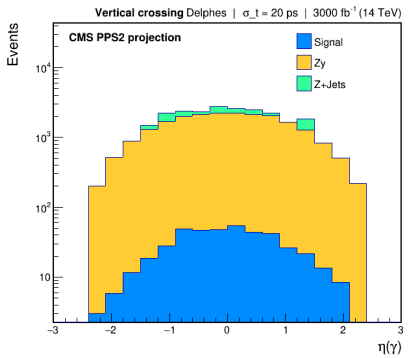
Proton Selection

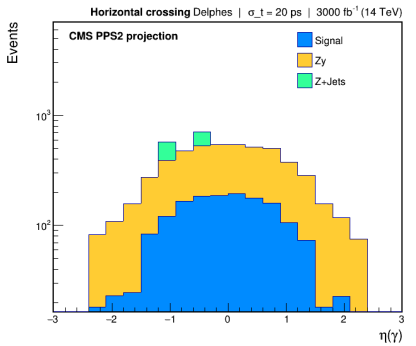
- Two protons are selected from both sides of the CMS detector.
- $\xi_{PPS} = 1 - |P_z(\text{GenProton})|/7000$.
- ξ and protons measured times are smeared by a Gaussian distribution with a mean of 0 and a standard deviation of 0.02 to account for the related PPS timing detector uncertainties.
- PPS acceptance:
  - $0.0147 < \xi_{\text{vertical}} < 0.196$
  - $0.0472 < \xi_{\text{horizontal}} < 0.287$
- To mitigate PU, two protons with the smallest $|Z_{\text{Vertex, cms}} - Z_{\text{Vertex, PPS}}|$ are selected.

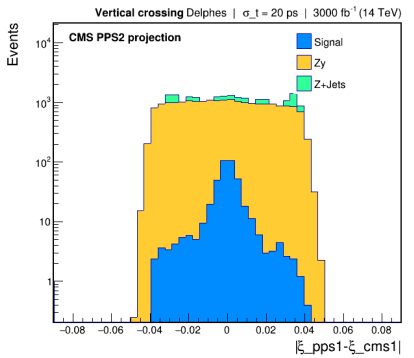
Central Object Selection (ξ Resolution Cut)

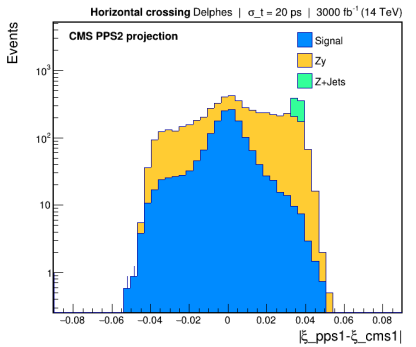










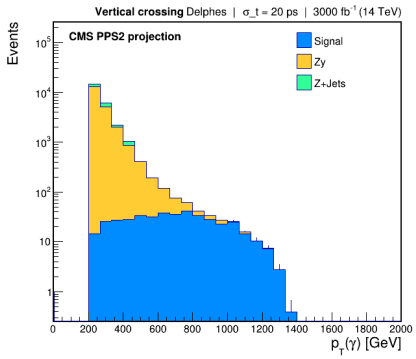


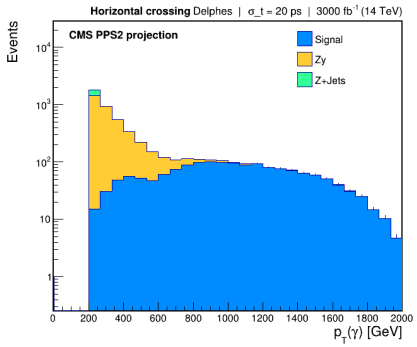
$$|\xi_{\text{cms}} - \xi_{\text{pps}}| < 0.2$$

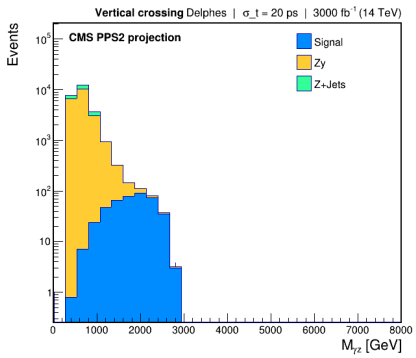
$$\xi_1 = \frac{\sum_{i=l+,l-,\gamma}(E_i + P_{z_i})}{\sqrt{s}},$$

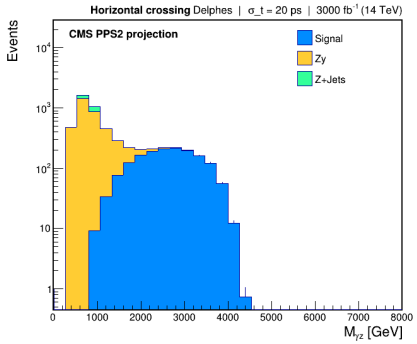
$$\xi_2 = \frac{\sum_{i=l+,l-,\gamma}(E_i - P_{z_i})}{\sqrt{s}}.$$

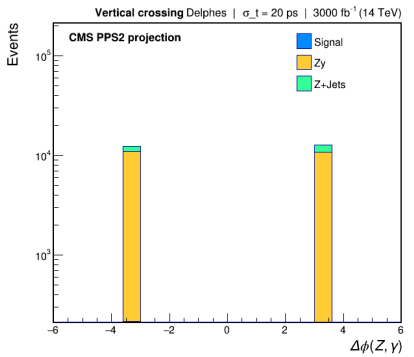
Central Object Selection (ξ Resolution Cut)

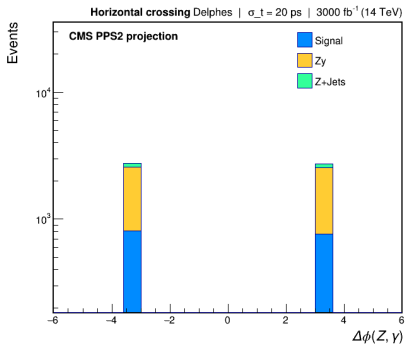










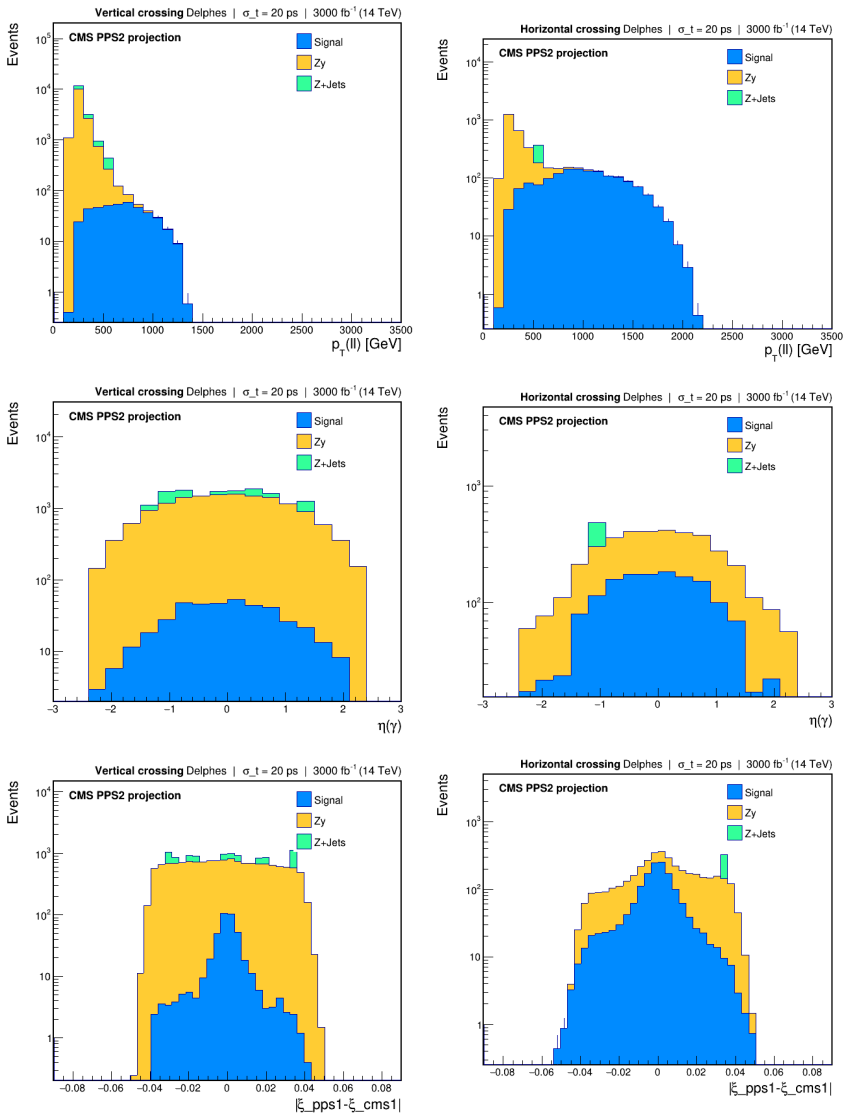


$$|\xi_{\text{cms}} - \xi_{\text{pps}}| < 0.2$$

$$\xi_1 = \frac{\sum_{i=l+,l-,\gamma}(E_i + P_{z_i})}{\sqrt{s}},$$

$$\xi_2 = \frac{\sum_{i=l+,l-,\gamma}(E_i - P_{z_i})}{\sqrt{s}}.$$

Central Object Selection (Z Vertex Cut)



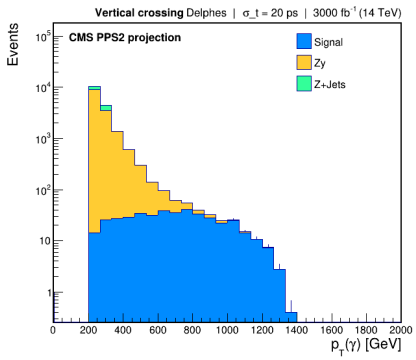
Selected Events within Z Vertex Cut for Vertical(Horizontal) crossing:

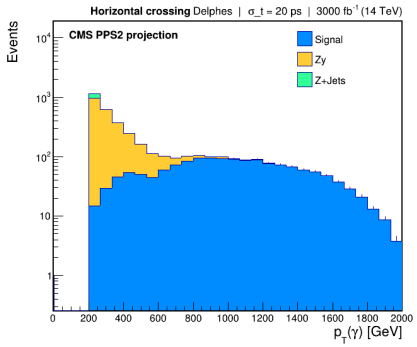
$$|Z_{\text{Vertex, cms}} - Z_{\text{Vertex, PPS}}| < 1(0.65)$$

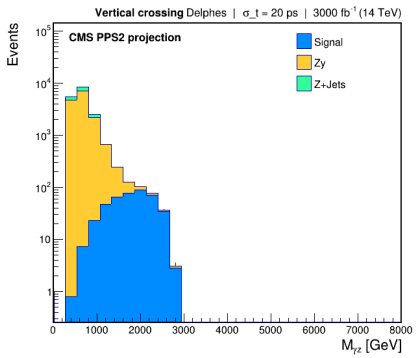
$$Z_{\text{Vertex, PPS}} = \frac{(t_{p1} - t_{p2})}{2} \times C$$

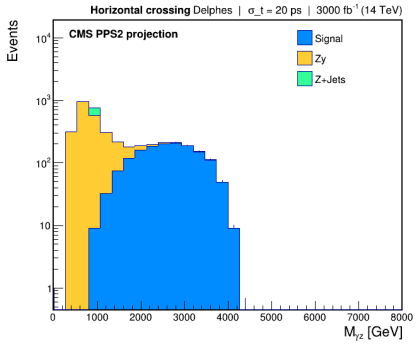
where $C = 30\,\text{cm/ns}$.

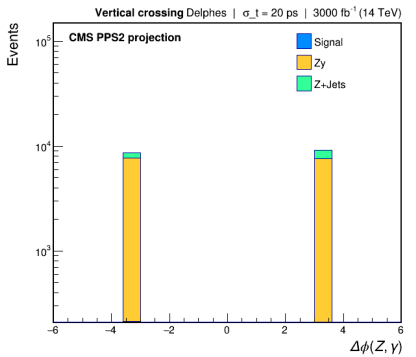
Central Object Selection (Z Vertex Cut)

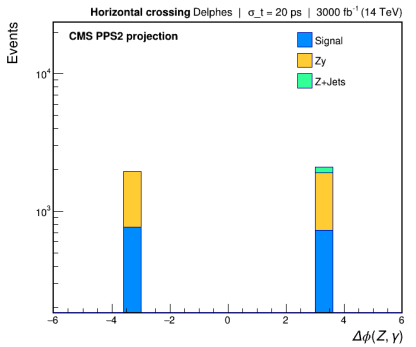












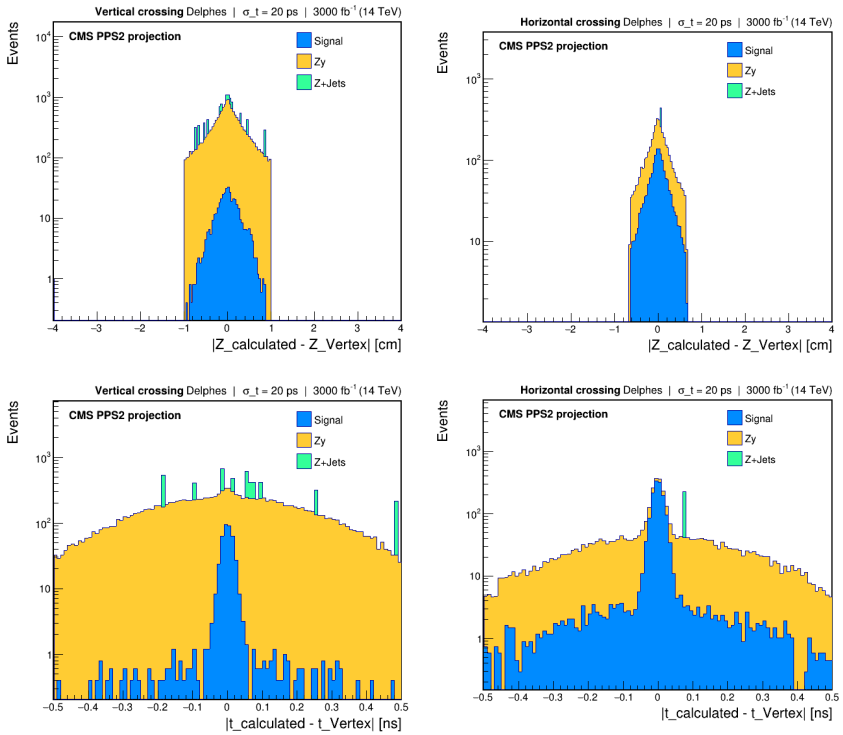
Selected Events within Z Vertex Cut for Vertical(Horizontal) crossing:

$$|Z_{\text{Vertex, cms}} - Z_{\text{Vertex, PPS}}| < 1(0.65)$$

$$Z_{\text{Vertex, PPS}} = \frac{(t_{p1} - t_{p2})}{2} \times C$$

where $C = 30\,\text{cm/ns}$.

Central Object Selection (Z Vertex Cut)



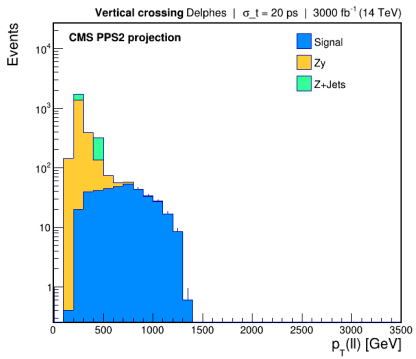
Selected Events within Z Vertex Cut for Vertical(Horizontal) crossing:

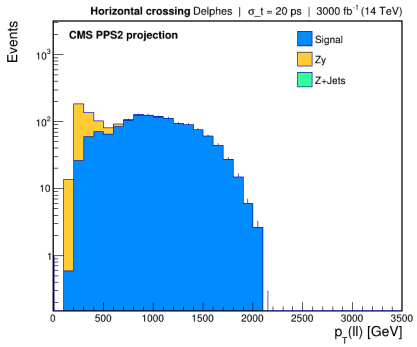
$$|Z_{\text{Vertex, cms}} - Z_{\text{Vertex, PPS}}| < 1(0.65)$$

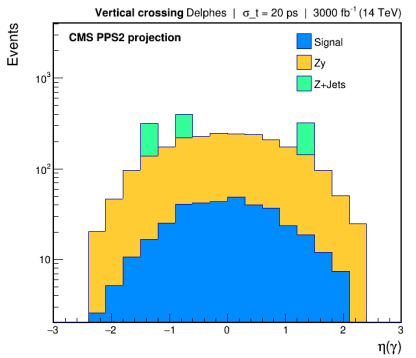
$$Z_{\text{Vertex, PPS}} = \frac{(t_{p1} - t_{p2})}{2} \times C$$

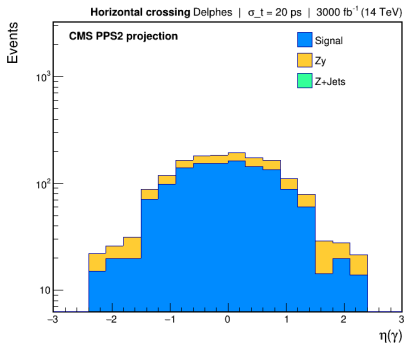
where $C = 30\,\text{cm/ns}$.

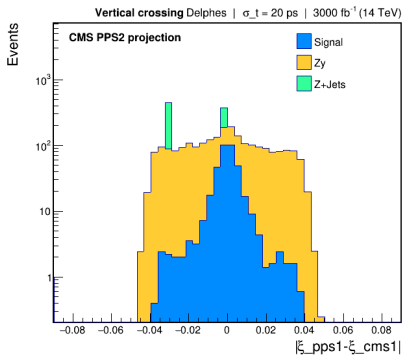
Central Object Selection (Timing Cut)

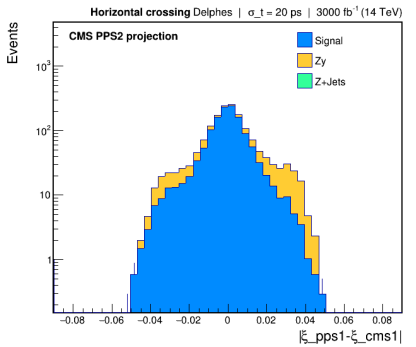












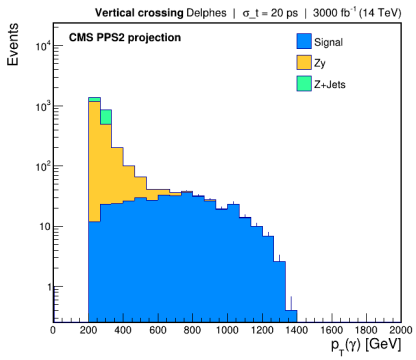
Timing Cut Condition:

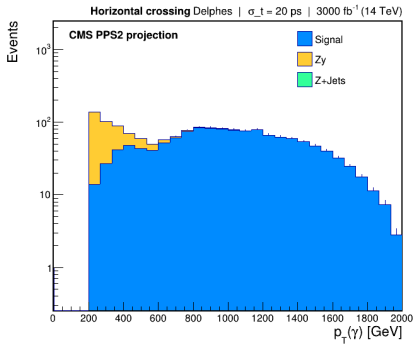
$$|t_{\text{Vertex, cms}} - t_{\text{Vertex, PPS}}| < 0.2$$

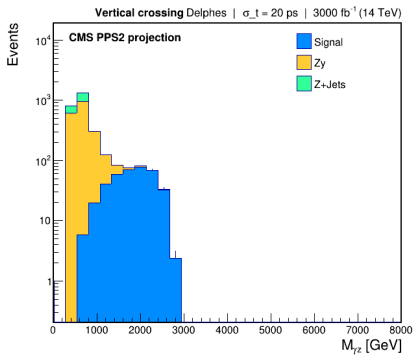
$$t_{\text{Vertex, PPS}} = \frac{(t_{p1} + t_{p2})}{2} - \frac{Z_{ppss}}{C}$$

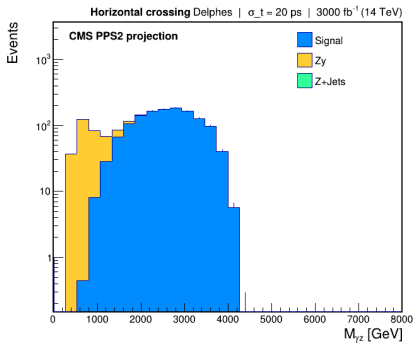
where $C = 30\,\text{cm/ns}$ and $Z_{ppss} = 23400\,\text{cm}$.

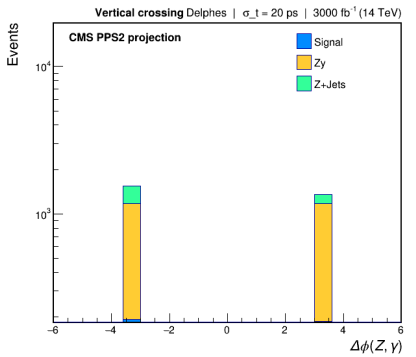
Central Object Selection (Timing Cut)

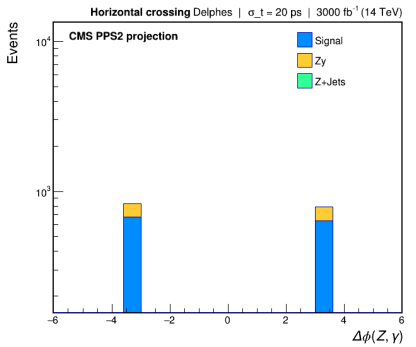












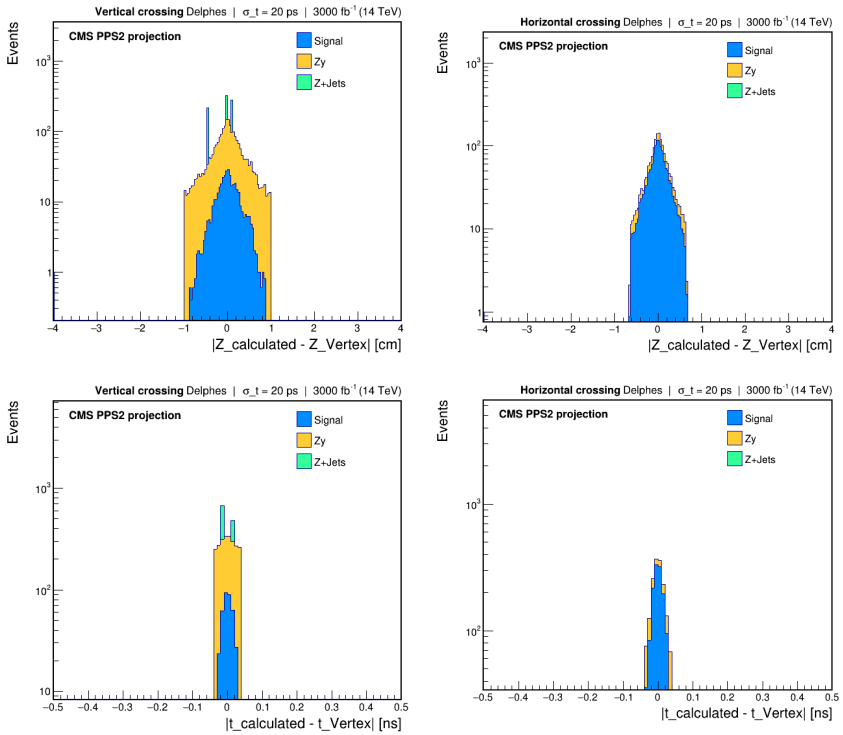
Timing Cut Condition:

$$|t_{\text{Vertex, cms}} - t_{\text{Vertex, PPS}}| < 0.2$$

$$t_{\text{Vertex, PPS}} = \frac{(t_{p1} + t_{p2})}{2} - \frac{Z_{ppss}}{C}$$

where $C = 30\,\text{cm/ns}$ and $Z_{ppss} = 23400\,\text{cm}$.

Central Object Selection (Timing Cut)



Timing Cut Condition:

$$\left|t_{\text{Vertex, cms}} - t_{\text{Vertex, PPS}}\right| < 0.2$$

$$t_{\text{Vertex, PPS}} = \frac{(t_{p1} + t_{p2})}{2} - \frac{Z_{ppss}}{C}$$

where $C = 30\,\text{cm/ns}$ and $Z_{ppss} = 23400\,\text{cm}$.
